### Medicine Bag Kit Instructions

- 1.Put 2 pieces of leather together. Pick which side of the leather you want for the outside and put the opposite side facing outward toward you.
- 2.Thread sinew into needle
- 3.From the top right hand corner, start lacing the 2 pieces of leather together through the pre-punched holes. Make sure to pull the sinew almost all the way through (leaving about 1" left) then tie a anchor square knot to keep the sinew from coming out.
- 4.Once you put the thread through the first hole, bring it back around to the same side to thread the next hole. Be sure to pull the thread tight, so that the leather puckers a bit. Continue until you get around to the top left hand corner.
- 5.When finished sewing, tie a knot by taking your needle through the leather just like you were but this time loop your needle through string then tighten, do this about 2 times.
- 6.Turn your bag inside out
- 7.Now with your piece of lace, take both ends and thread through each of the middle holes and lace around the top weaving inside to outside all the way around.
- 8.Tie a knot w/ the two ends of your lace.
